

JUSTINEAI™ · THE AGENTIC LEGAL OS

Practice law. JustineAI handles the rest.

Personal Injury and Workers' Compensation in market. Four additional editions on the roadmap.

JustineAI™ is the Agentic Legal Operating System for litigation practice — powering plaintiff-side personal injury and workers' compensation, with four additional editions on the roadmap, each sharing the same compositional fabric and the same supervisor pattern over named sub-agents. The AI reasons; the attorney decides.

01

PI Edition

Plaintiff-side personal injury, end-to-end across the nine-status case lifecycle. 31 capabilities live. 14-day free trial for solo and small firms.

02

Six Named Agents

Justine supervises Intake, Medical, Valuation, Strategy, Deposition, and Case Advisor sub-agents. One supervisor, one MSA, one Model Rule 5.3 posture.

03

Demand Package

Four-pass demand-letter pipeline + four-layer QA. ICD-10 / CPT validation. CourtListener-verified citations. One-click cover + Chronology + Bill Stack ZIP.

04

Curation Layer

Nine-step record curation: OCR, provider canonicalization, code validation, encounter coalescing, lien joining.

05

WC + Roadmap

Workers' Comp in market, with ChironAI™ OM upstream. Mass Tort next; Med Mal, Insurance Bad Faith and Employment Class to follow. Same Eve-Legal F5 — different calibration.

06

OS Layer

Case management, deadlines, conflict check, trust accounting, time tracking, e-filing, e-signature, client portal. Microsoft 365 + Filevine integration.

AND SMALL PI PRACTICES

ON THE ARCHITECTURE

Eve-Legal™ F5/reasoner — the Eve-Fusion™ instance calibrated to legal reasoning. Five cooperating models composed best-fit per request, the reasoner fine-tuned on Eve-Genesis™ (Law), and three frontier slots composed best-fit per request. The supervisor-over-sub-agents pattern is shared across every edition.

ON TRUST + COMPLIANCE

Attorney-client privilege preserved by design — JustineAI operates under the attorney of record's supervision, outputs are work product, audit logs record every reasoning step. No customer data trains the reasoner. Tamper-evident audit chain exportable for ethics review.
